Education

Concordia University — Montreal, QC
Bachelor of Engineering in Computer Engineering — *Sep. 2024 – Sep. 2029 (Expected)*

Experience

Co-Founder & Software Engineer | LocalGo — Jan. 2026 – Present | Remote
- Built LocalGo's full-stack ordering and delivery app with **React Native**, **TypeScript**, **FastAPI**, and **Postgres**.
- Prototyped **GOER AI** with **Python** and **Groq** tool calling for menu search and contextual product questions.
- Containerized **FastAPI** services with **Docker** and **Docker Compose** for repeatable builds and app deployment.
- Built iOS and Android releases with **Expo/EAS**, using **GitHub Actions** for type checks and automated tests.
- Provisioned infrastructure with **Terraform** and **Ansible**, enabling repeatable deployments and service rollback.
- Deployed services on **Kubernetes**, packaged builds with **Helm**, and monitored application health with **Datadog**.

Software Engineering Intern | CopyPasta — Feb. 2026 – May 2026 | Remote
- Built offline file conversion in **Swift/SwiftUI** for ClipTex, a native macOS **OCR** app using Apple's **Vision** API.
- Built a **26-format** image, document, audio, and video engine using **AVFoundation**, **ImageIO**, and **PDFKit**.
- Added automated conversion tests to the **CI/CD** pipeline and organized file-processing logic into **Swift** classes.
- Kept document and media conversion entirely on-device, enabling offline use without sending user files to servers.
- Managed **App Sandbox** entitlements and security-scoped file access for CopyPasta, a live macOS App Store app.

Robotics Software Engineer | Space Concordia — Sep. 2025 – Jan. 2026 | Montreal, QC
- Designed and simulated an autonomous robot with **ROS2** and **Gazebo**, programming in **Python** and **C/C++**.

IEEE Lab Supervisor | IEEE Concordia — Aug. 2026 – Present | Montreal, QC
- Supervised daily engineering lab operations, maintaining workstations, tools, and electronic component inventory.
- Mentored students through circuit debugging and microcontroller projects while enforcing engineering lab safety.

Full-Stack Software Engineer | Freelancer (PureBranded, Singer Haley) — 2025 – Present | Remote
- Shipped custom web applications and REST backends for small businesses, from database design to deployment.

Projects

GOER AI | *GitHub* — Jun. 2026
- Developing LocalGo's chat-based ordering flow for product discovery, customization, checkout, and order tracking.
- Built a **Python** prototype with **Groq** tool calling for catalog-grounded menu search and contextual follow-ups.
- Designing **FastAPI** agents for carts and checkout with validated pricing, **Stripe**, and a **React Native** chat UI.

Jarvis - Home Automation System | *LangChain* | *GitHub* — Mar. 2026
- Built Jarvis, a voice-controlled home automation system with **Google Gemini** and **Vosk** offline speech-to-text.
- Wrote **C/C++** firmware for **ESP32** nodes and custom PCBs over UART/I2C, driving **SG90** servos and relays.
- Deployed across **4+ rooms**, turning spoken intent into low-latency servo and relay commands on **ESP32** nodes.

Facelytics | *Web Application* — Dec. 2025
- Built Facelytics, a face verification app comparing **InsightFace** embeddings, on **FastAPI**, **Postgres**, and **React**.

Certifications

Cisco CCNA (in progress) | **CKAD** – Certified Kubernetes Application Developer (in progress)

Technical Skills

Languages: C/C++, Python, TypeScript, JavaScript, Java, Swift, SQL, Bash
Cloud & DevOps: AWS, Docker, Kubernetes, Helm, Datadog, Linux, CI/CD (Github Actions)
Dev Environment: Cursor, Herdr (TMUX), vim/neovim, Pi coding agent, Claude Code CLI
